

SODIUM CYANIDE

TAEKWANG INDUSTRIAL

TAEKWANG HAS GREAT INFLUENCE ON DIVERSE INDUSTRIES

Taekwang Group has a competitive position in various business sectors, including manufacturing, finance, media, infrastructure & leisure, and education.

MANUFACTURING

Petrochemicals / Chemical Fibers & Textiles

FINANCE

Insurance / Securities / Asset Management / Banking

AEDIA

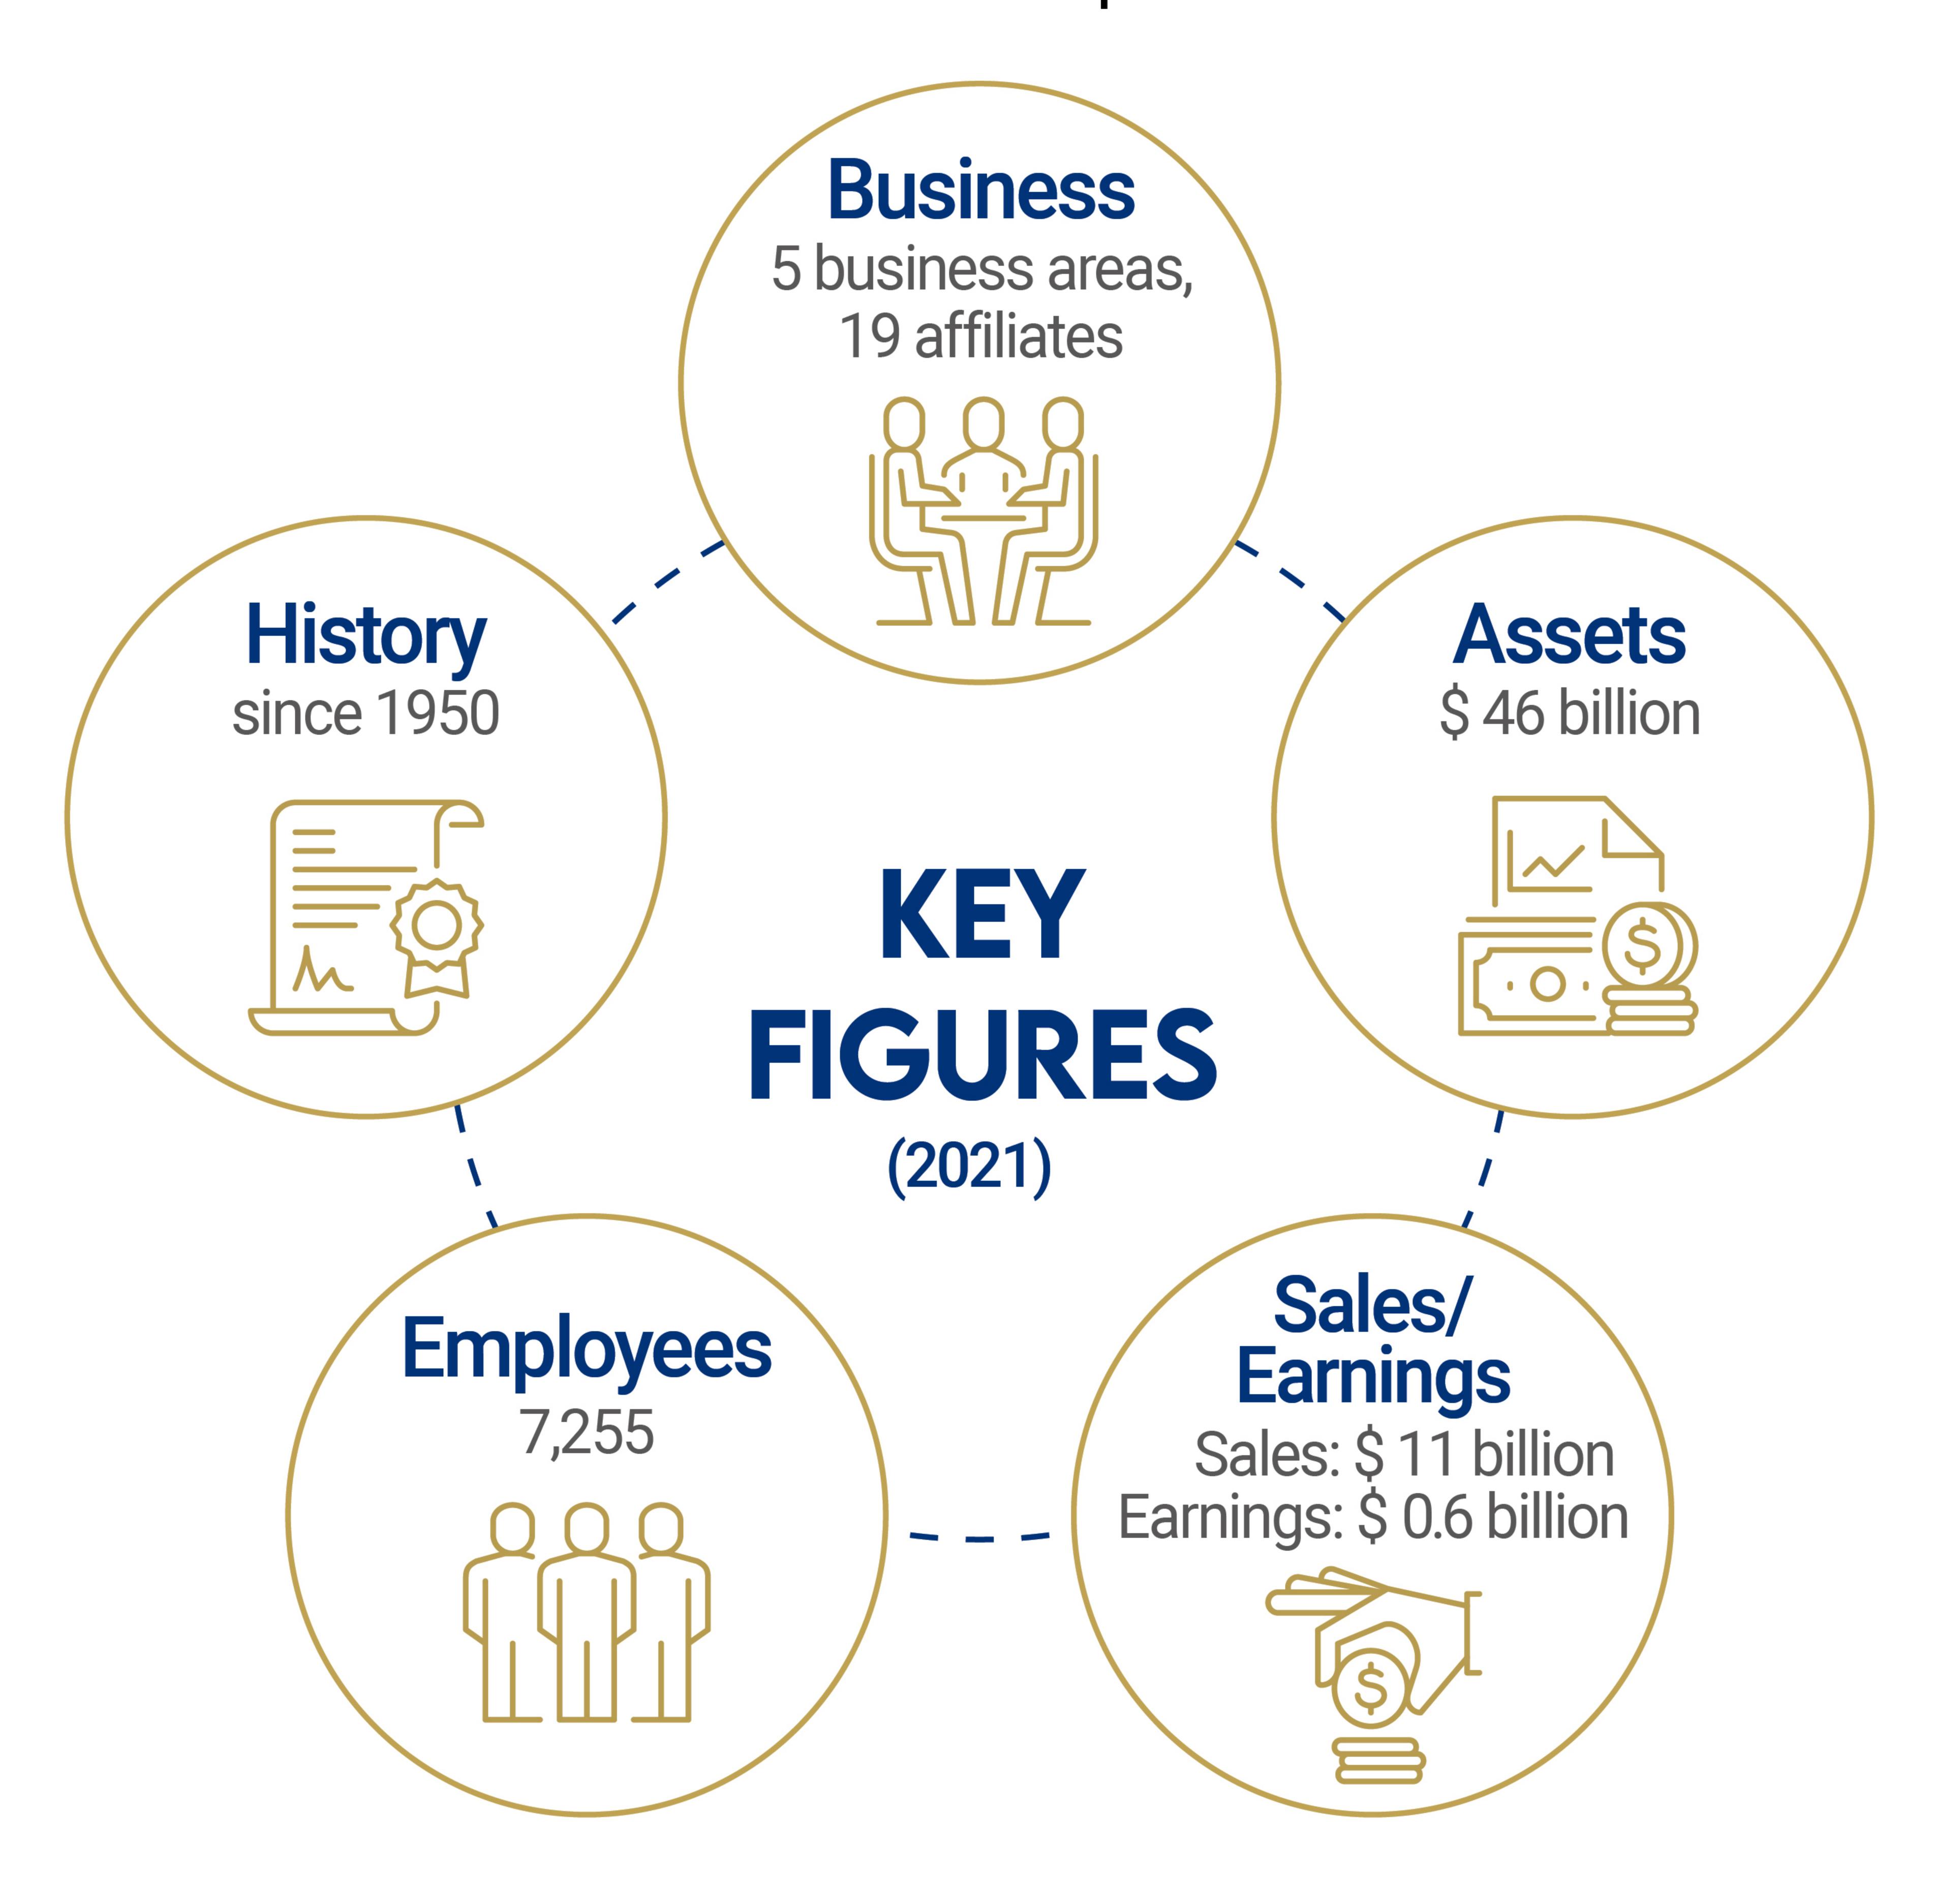

Media Content / Art Cinema

INFRASTRUCTURE & LEISURE

IT / Infrastructure / Leisure / Culture

EDUCATION

Educational Institution / Scholarship Foundation

STRONG COMPANY WITH VERTICALLY INTEGRATED PRODUCTION LINES

Taekwang Industrial, a parent company of Taekwang Group, has business competitiveness by compliting vertical integration from various productions to petrochemicals with leading technology and stable finance.

OUR PRODUCTION

KEY FIGURES (2021)

(KT)

Petrochemicals	
Purified Terephthalic Acid	1,000
Acrylonitrile	290
Propylene	300
Sodium Cyanide	65
Hydrogen Peroxide	55
Ammonium Sulfate	55

Operating Profit \$0.3 billion

Assets \$3.4 billion

Chemical Fibers & Textiles

Acetonitrile

Acrylic Fiber	65
Nylon	50
Low Melting Fiber	75
Spandex	30
Spun Yarn	22
Polyester	73
Polyester Fabrics	60m (yd)
Tricot Fabrics	10m (yd)

Sales \$1.9 billion

Sites
7 plants,
2 offices

Advanced Materials

Aramid Para 1.5 Moda crylic 12

Employees 1,456

WE HAVE A GREAT ROLE AS ONE OF THE MAJOR PLAYERS IN FAR EAST ASIA

Taekwang has been producing sodium cyanide in Ulsan since 1997. The plant's production capacity has now been expanded to 65,000 metric tons per year. As a signatory of the International Cyanide Management Code (ICMC) and ISO-certified manufacturer,

Taekwang applies the strictest standards to manufacturing facilities and maintenance procedures.

Certified by

International Cyanide Management Institute

QUALIFIED SUPPLIER OF SODIUM CYANIDE WITH HEAVY FOCUS ON SAFETY

Our goal is to make sure no harm is caused to both humans and the environment throughout the production and transportation of cyanide.

Our SHE (Safety, Health and Environment) team patrols around all facilities and manages related information on our database system, trying to prevent all potential risks.

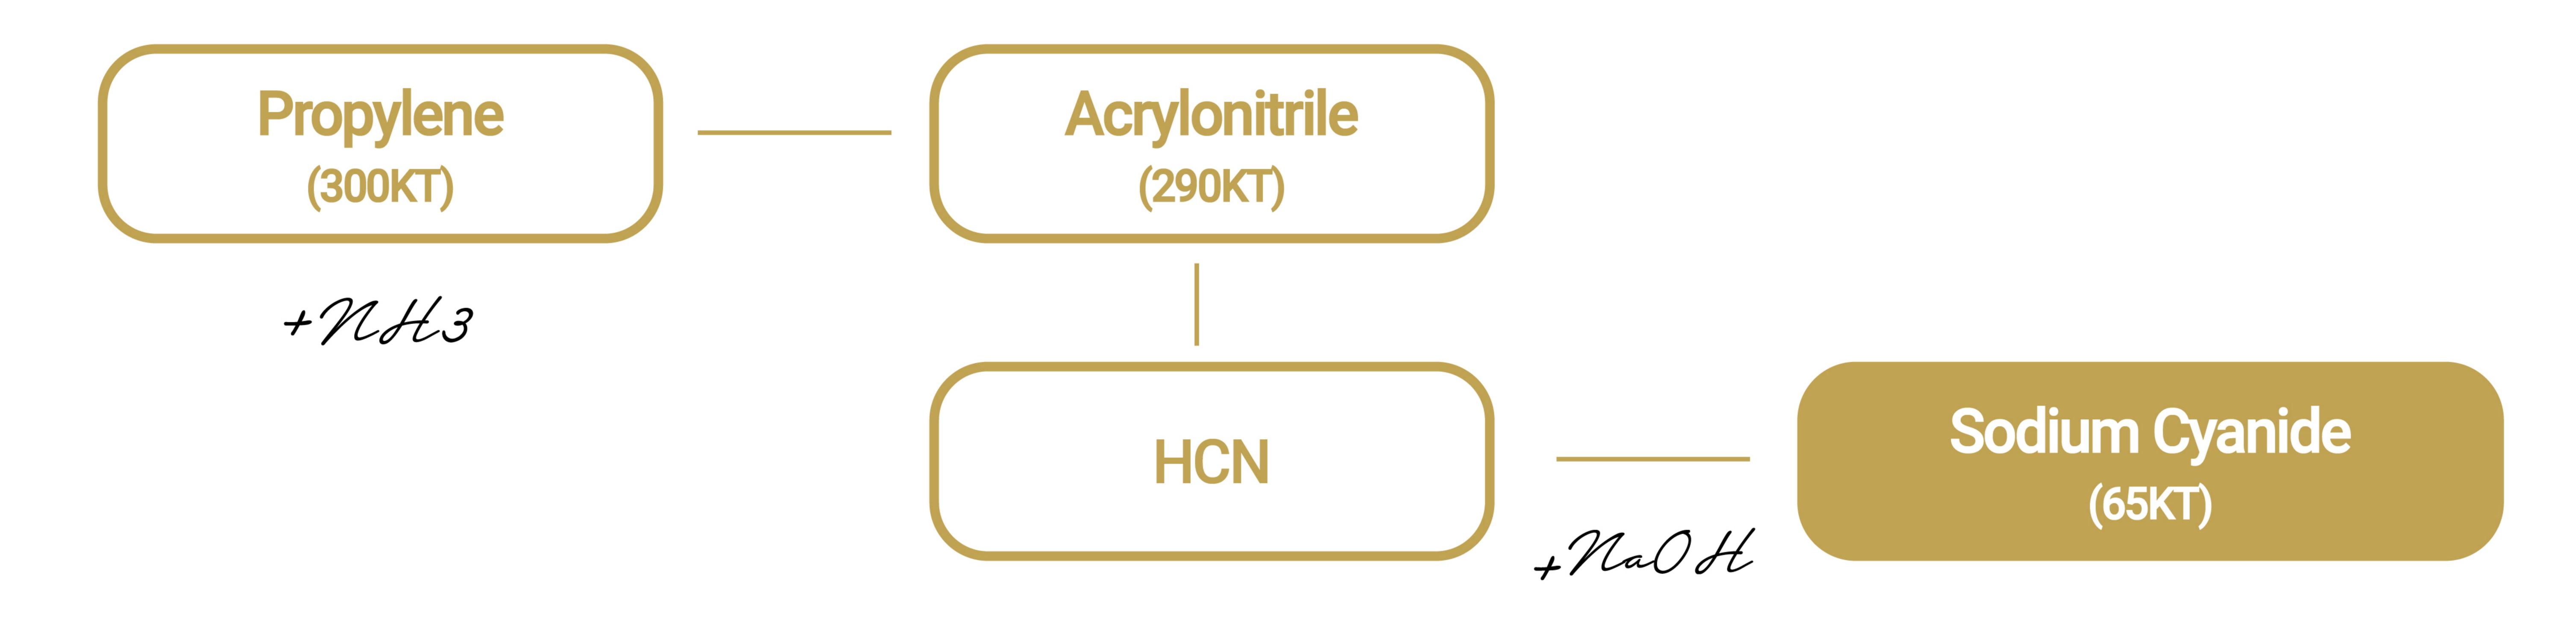

They are well-trained and organized to maintain safety as a top priority.

Our sodium cyanide (NaCN) is made using hydrogen cyanide (HCN) produced as a byproduct from our acrylonitrile (AN) manufacturing process. Acrylonitrile and sodium cyanide are produced simultaneously and continuously from the same manufacturing plant with shared infrastructure services.

As there is a stable demand for acrylonitrile in the Asian region, we are producing acrylonitrile at an operating rate of 95% or above every year.

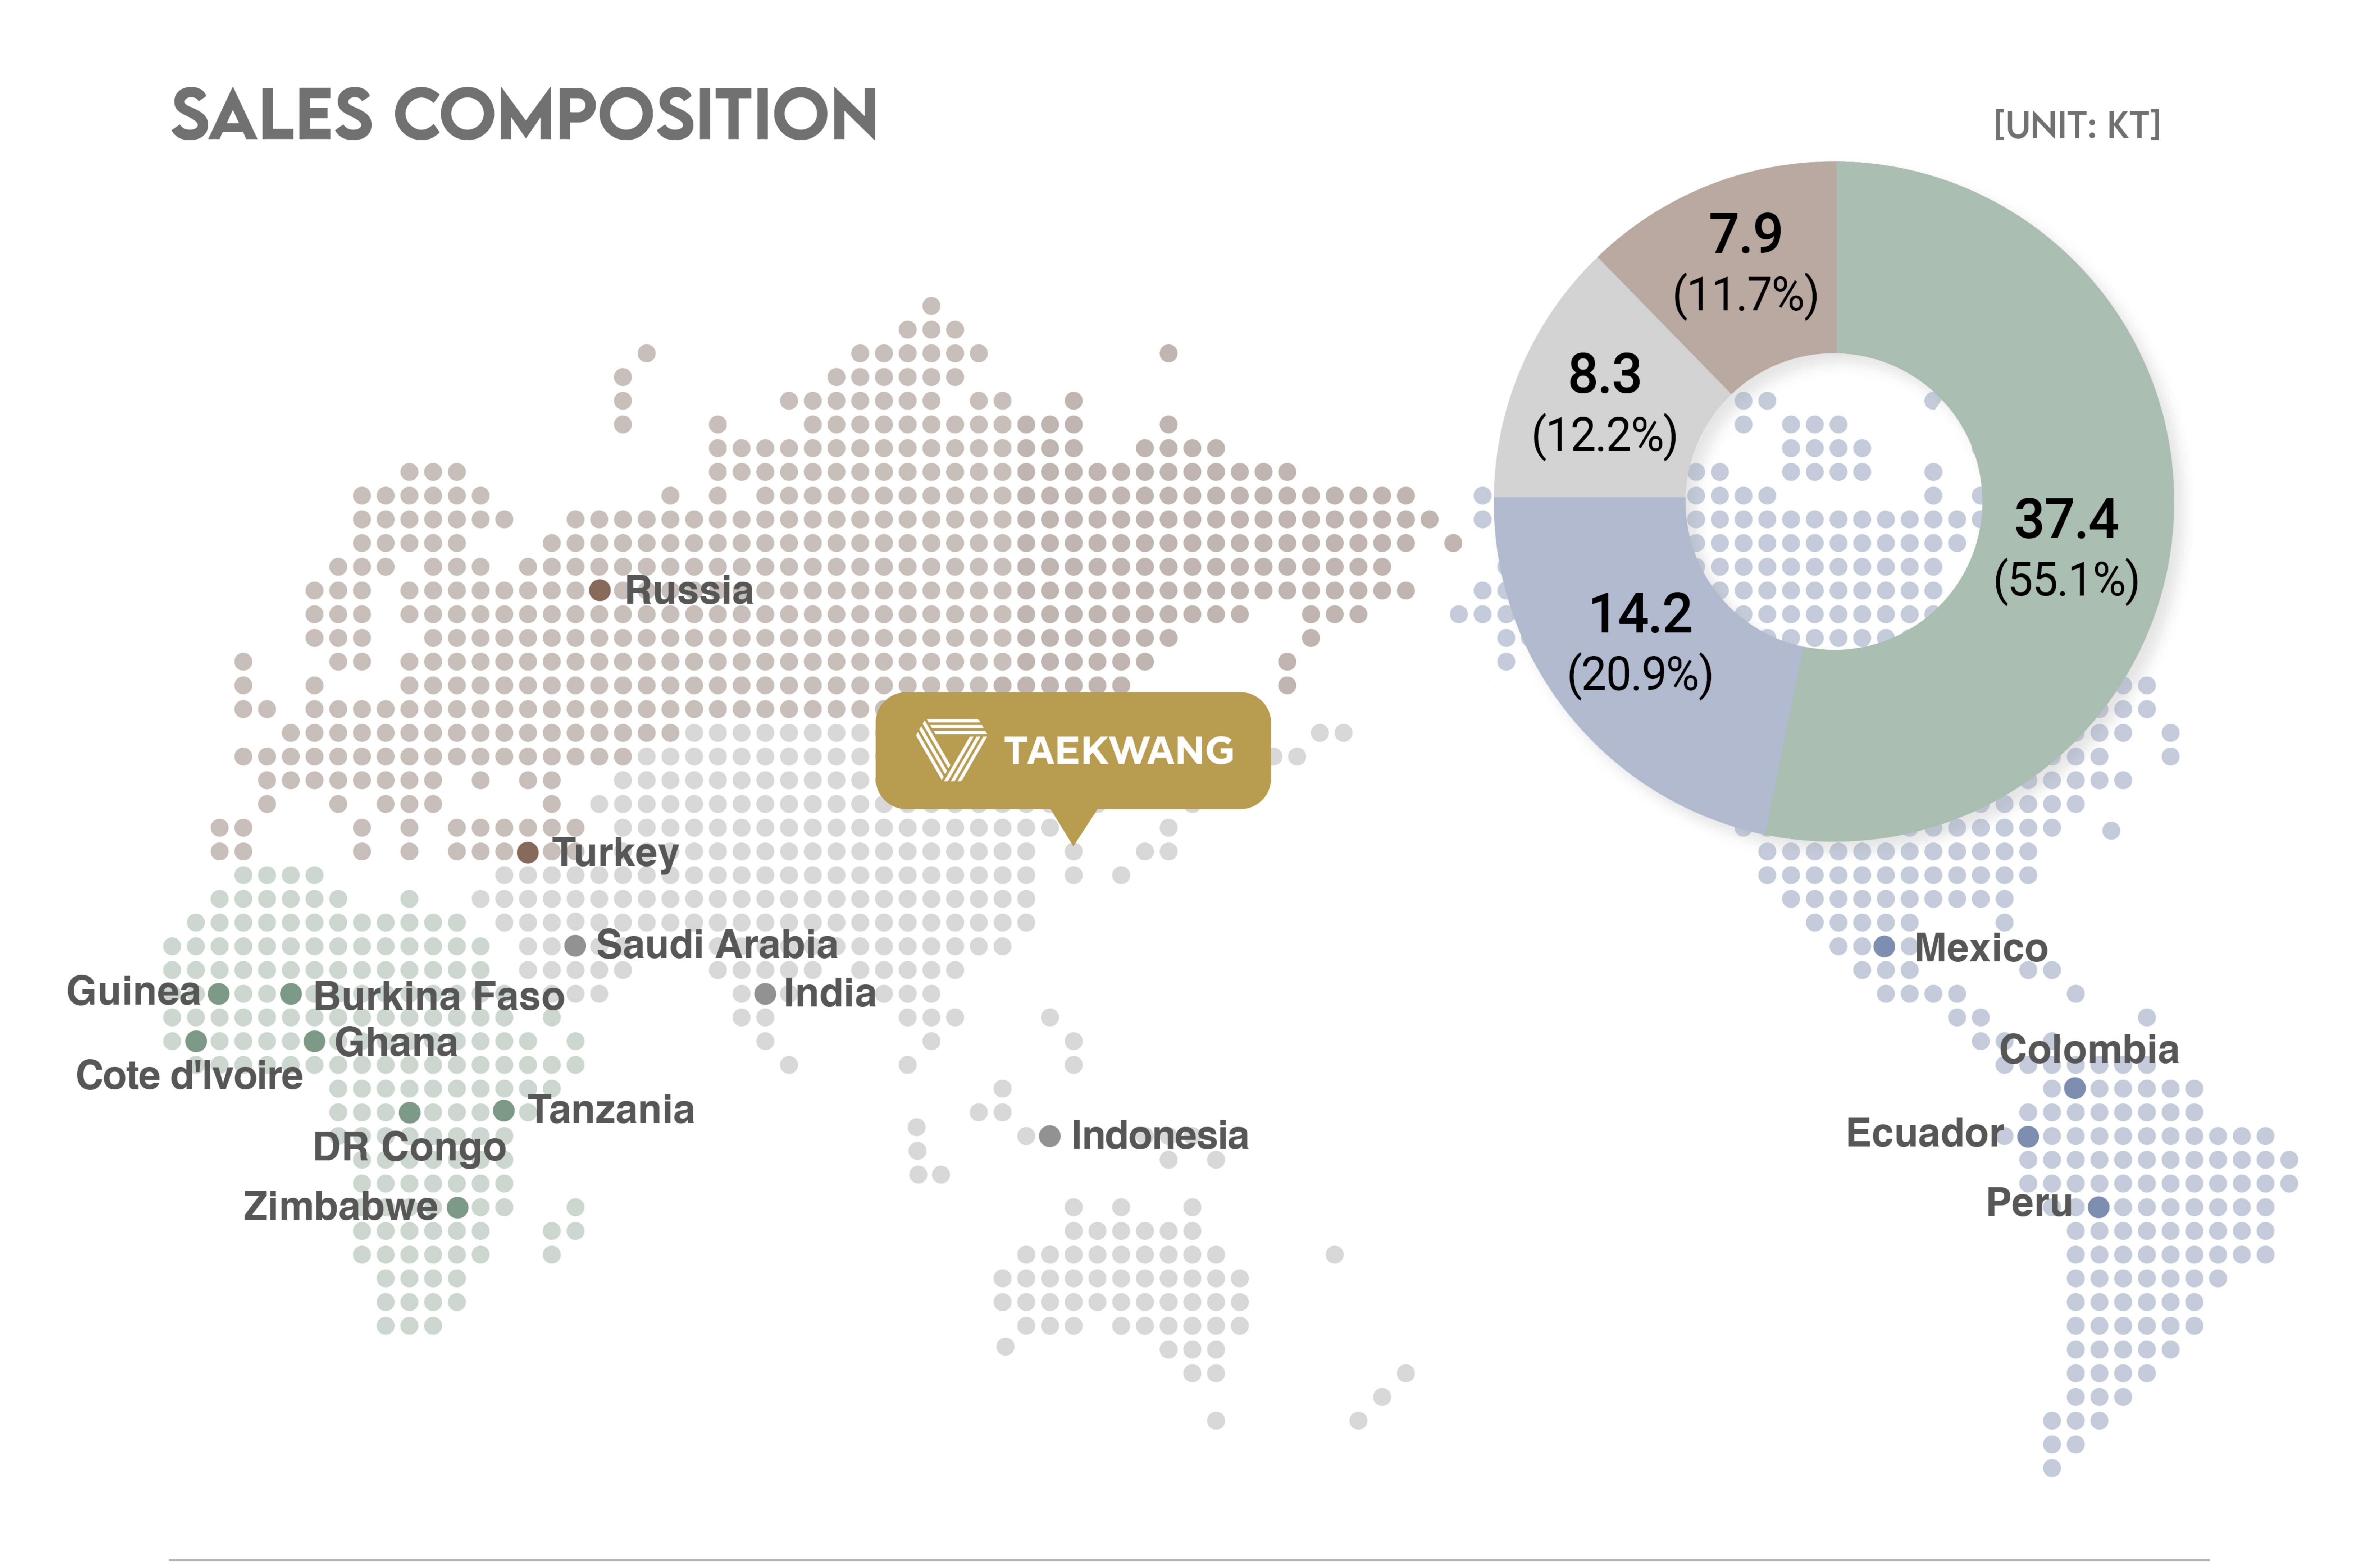

66 Be our partner and upgrade your value 99

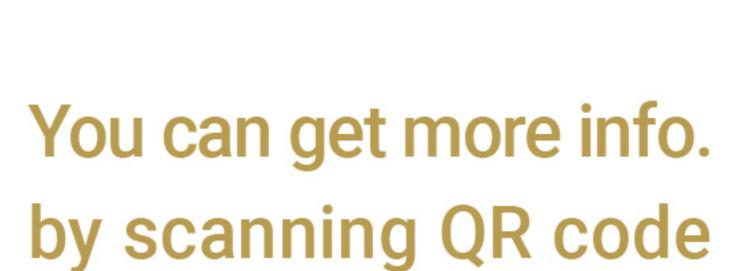

All of the resulting byproduct hydrogen cyanide is put into sodium cyanide production, which guarantees at least 60,000 metric tons of annual sodium cyanide production.

GLOBALLY PROVEN
SUPPLY TRACK RECORD
We supply to companies in 63 countries including the global top 10 mining companies and have earned a strong reputation from our partners.
